Current Features analysis

High-level description

The application is used by different users, each with their own user account to create, read and manage notes.

The admin users can also manage other user's accounts and also notes, the system won't allow you to create a note unless the note has the word "Perfect" in its title.

Currently, the normal users can execute these operations:

1. Can register for smartnotes account.
2. Login into smart notes
 - a. Create a note.
 - b. Read a note.
 - c. Update a note.

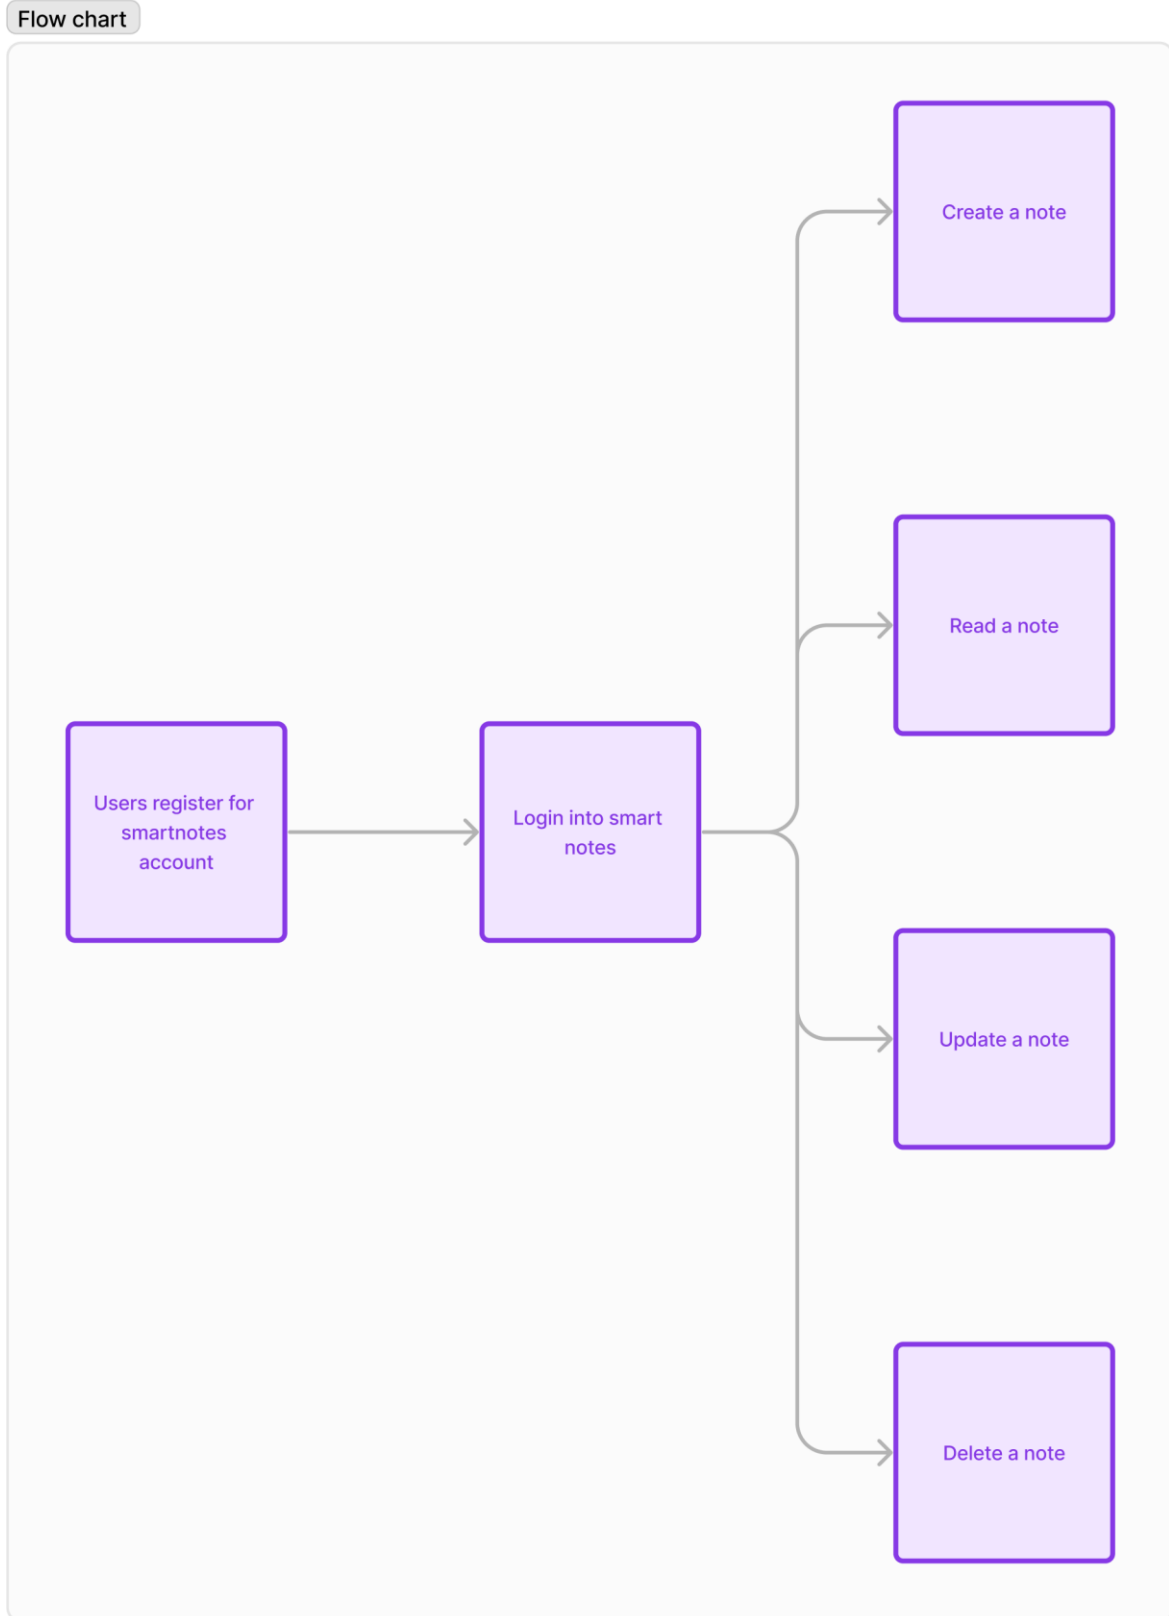

- d. Delete a note.

Systems involved.

System	Used for	User role needed
Django Admin	Manage the smartnotes application users and notes.	The user must have admin access.
Notes	Displaying the notes, creating new notes, updating notes, deleting notes for the logged in user.	The user must have a user account (username and password)

Process flow.

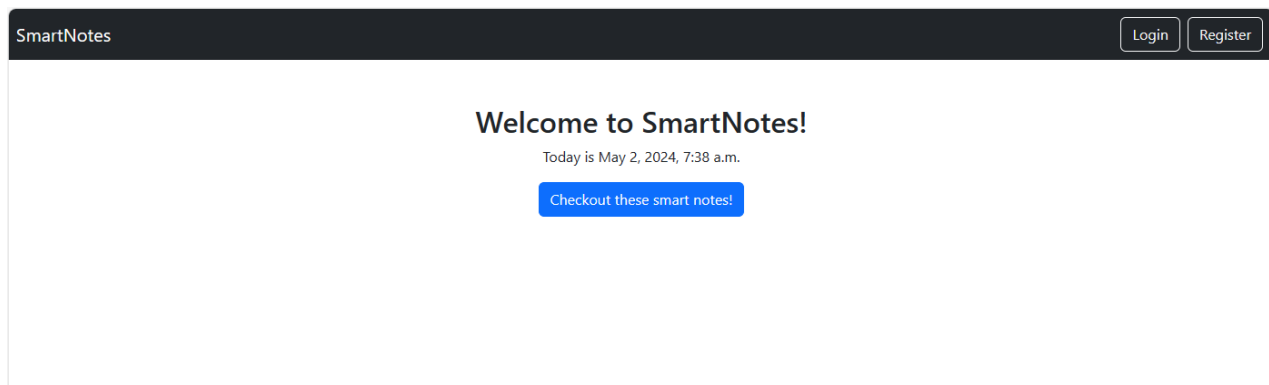

Here is a description of the process in the form of a flow chart:

Detailed steps

1. User logs into the application.

2. The URL used by user is: <http://smartnotes.local:8000/>

2. User register for smartnotes account

The URL used by user is: <http://smartnotes.local:8000/register>

This is how the register interface looks like:

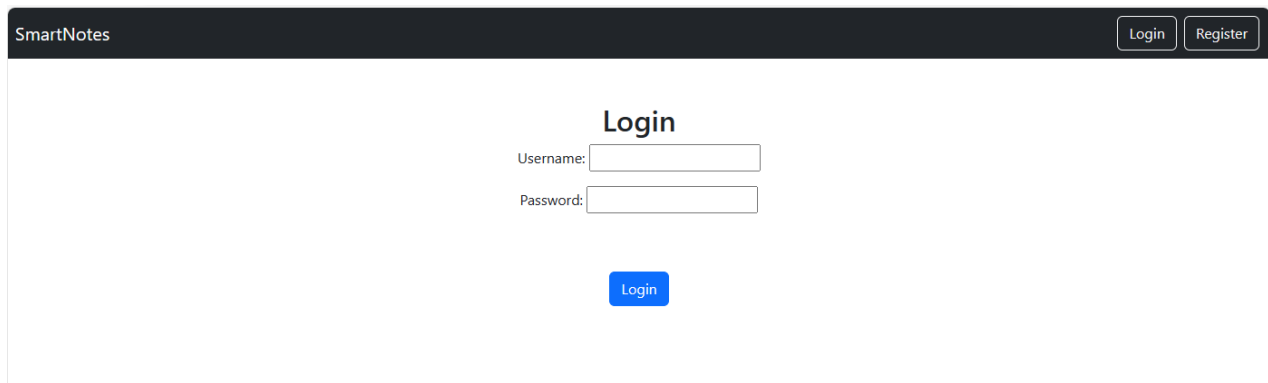

A screenshot of the SmartNotes application's register page. The page has a dark header bar with the text "SmartNotes" on the left and "Login" and "Register" buttons on the right. The main content area is white and features the heading "Register" in bold. Below the heading, there are two input fields: "Username:" and "Password:". The "Username:" field has a note: "Required. 150 characters or fewer. Letters, digits and @/./+/-/_ only." Below the "Password:" field, there is a list of four bullet points: "Your password can't be too similar to your other personal information.", "Your password must contain at least 8 characters.", "Your password can't be a commonly used password.", and "Your password can't be entirely numeric." Below the list, there is a "Password confirmation:" field with a note: "Enter the same password as before, for verification." At the bottom left, there is a blue button labeled "Register".

user can create personal credentials (a username and a password).

2. Login into smart notes

The URL used by user is: <http://smartnotes.local:8000/login>

This is how the login interface looks like:

The screenshot shows a web browser window with a dark header bar. On the left of the header is the text "SmartNotes". On the right are two buttons: "Login" and "Register". The main content area is white and contains the following elements:

- The word "Login" in a large, bold, black font.
- A label "Username:" followed by a text input field.
- A label "Password:" followed by a text input field.
- A blue button with the text "Login" in white.

user enter his/her personal credentials (a username and a password).

3. Create a note

After logging into the site, the user inserts title and content for the first note:

SmartNotesHomeLogoutCreate Note

New Note

Title:

A new note here

Write your thoughts here:

This is the content of my new [note](#)

Save

Cancel

User enter the title and content of their note and saves a note.

Note! User can not create a note if the title does not contain the word “Perfect”

A new note here

Write your thoughts here:

This is the content of my new note

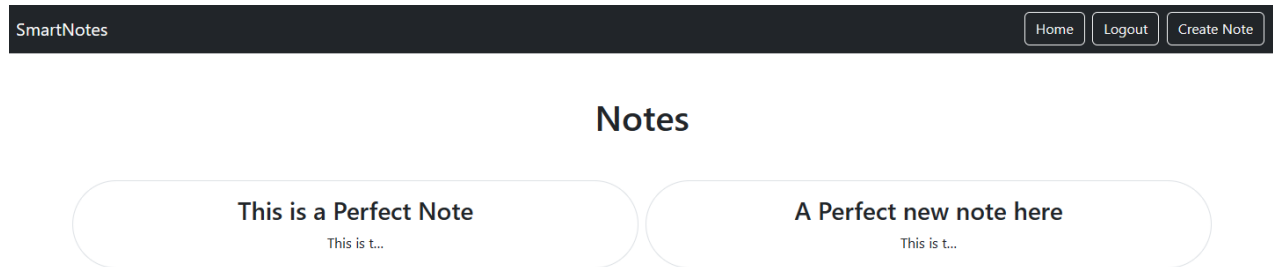

Save

* Title must contain Perfect

Cancel

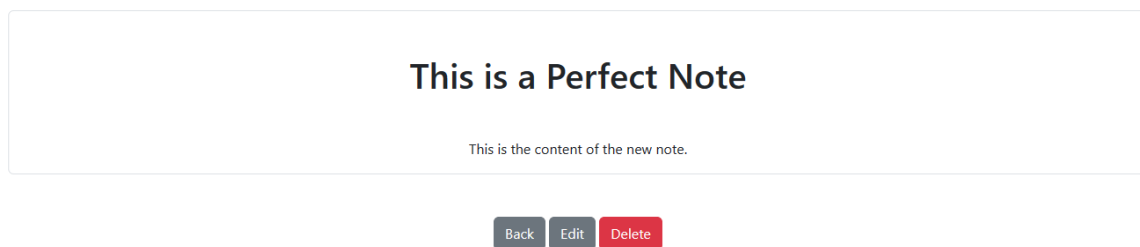

4. Read a Note

After creating a note, the user can read their note:

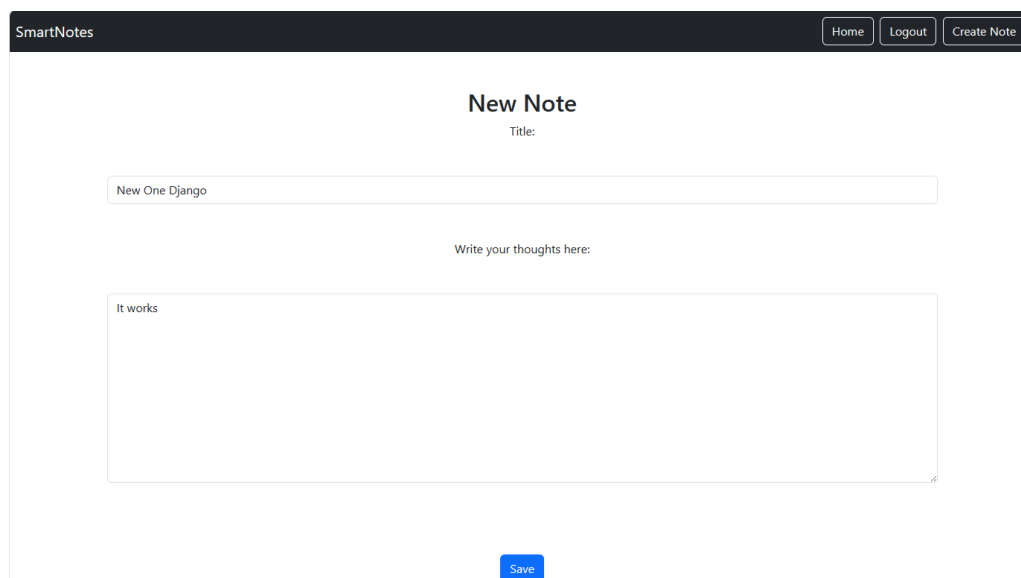

User can now read/see his/her notes.

User can now read/see his/her notes. **Clicking on a note's title opens the note for reading and more options.** Like below

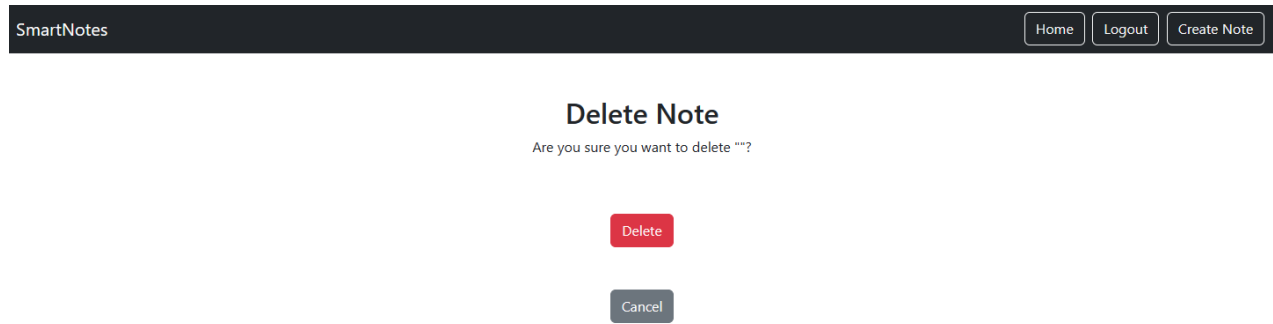

5. Update a Note

After creating a note, the user can read their note:

4. Delete a Note

After creating a note, the user can read their note:

User can now delete his/her note.

Possible exceptions

Exceptions are special cases and rules that can influence and even stop the smooth running of the smartnotes app.

Logic Exceptions

Missing data

username, password, note title and notes content are all required: in case some of this information is missing, the user will not be able to login or create a note.

System Exceptions

Invalid credentials

If the user provides invalid credentials, the login is not successful, and the process stops.
